Engineering

Customer

The customer is a leading consumer food solutions business based across the UK.

Images

History/Achievements

The engineering division of a leading food solution business had a requirement to refurbish their engineering workshop. The end user asked their electrical supplier to source and supply workbenches. The electrical supplier arranged with the end user for BenchMaster to visit site and agree the specification. After the visit a quote and plan was presented within 24 hours and submitted for sign off. Once the budget/plan was signed off BenchMaster delivered one workbench per week over the course of a few months to suit the customer.

The Work/Description

20 x 1260SC - 1200mm long x 600mm deep x 840mm 2mm galvanised steel top heavy duty workbench with a blue frame (RAL5010), 3 drawer unit right hand side and bottom shelf.

The results

The engineering division of a leading food manufacturer required the workbenches manufacturing and delivering one over a few months. This fitted in with the growth at one of their manufacturing facilities in the UK. Visiting the engineering division and making a prompt offer played a significant part in winning this contract. The call off schedule also helped so these ready to use workbenches were delivered when required.

Quote / Comments

'BenchMaster was an easy choice to deal with from start to finish. Within 24 hours of visiting the site we received a quote and plan. The quality of workbenches is fantastic and well made. The engineering department now has a uniform look with all the operators having their own work station. We would recommend BenchMaster to other customers.'
